Corporation has fulfilled
obligations under the
Mined Land Reclamation
Act of 1975 (Section 40-8,
U.C.A., 1953, as
amended), and will
employ the following
reclamation techniques
on approximately 19
acres of leased claims:
DURING OPERATIONS:

1. Mining will be
conducted in a safe,
orderly, and minerlike
fashion and in such a
manner as to minimize
visual and environmental
degradation.

2. Prior to the
construction, available
topsoil will be removed
and stockpiled for
redistribution on
disturbed surface areas
at the time of
reclamation.

3. Mining will be
underground room and
pillar and open stoping,
and will disturb
approximately 19 acres of
surface area for support
facilities, including
access roads.

4. Ore will be stockpiled
at the mine site until it
can be trucked to the mill.
AFTER OPERATIONS:

1. All extraneous
debris, scrap metal and
wood, and unusable
buildings will be removed
from the site.

2. The mine portal and
vent holes will be sealed
to prevent unauthorized
entry.

3. The developmental
wasterock stockpile will
be recontoured to a stable
slope and the surrounding
area will be contoured to
prevent water ponding.

will be respread over the
disturbed surfaces to the
extent possible and all
areas will be scarified,
broadcast seeded with a
diverse seed mixture, and
drag covered.

will be monitored and
reseeded if necessary.
